

## an iText 7 add-on

### Keep your PDFs clean of sensitive data

iText Software's programmable libraries are used globally by companies and organizations to generate and edit PDF documents, often at high volumes. With the most recent iteration of its platform, iText 7, you get the opportunity to delete sensitive information from PDF documents with pdfSweep.

### Let's get cleaning!

Permanently erase sensitive content from a PDF by eliminating the text, line art or image from the visible document. pdfSweep will also eliminate any relation to the erased information, keeping your document readable, with a blank or colored space for the removed word or image. It will look similar to the old print versions with a black bar or corrector fluid covering the sensitive data, but without any of the underlying information left behind.

### Key advantages

- Permanently remove sensitive data
- Digitally share cleaned documents
- Retain document readability
