# ITEXT

Automation

iText offers the opportunity to create and manipulate PDF's programmatically. That means that you can automate your high volume document processes to save time and focus on other priorities. By using templates and dynamic information- like text and images, you can easily fill and update documents efficiently based on your specified parameters. Allowing you to use multiple templates and flexible updates to your information.

Glossary

iText library
The world's largest PDF library with 15 years of development and dedicated support for updating documents programmatically.

ZUGFeRD
A German standard, that allows the exchange of invoices between supplier and payer without prior arrangements for specified document reading software.

Business use

Think of the last time you flew on a commercial flight. Your boarding pass looked like everyone else's- except for your personal information. This is done using a template for the ticket, and auto-fill information for your individual information on the ticket. Rather than have a single person enter your personal information into a template, you can use a PDF library like iText to automatically fill information into a template, so you can get on to your next destination.

Key advantages for iText users

- Automated processes
- Flexible editing
- Guaranteed readability
- Guaranteed retrievability
