

What is PDF?

The Portable Document Format (PDF) was conceived to be able to capture documents from any application, send electronic versions of these documents anywhere, and then reliably view and print these documents on any machine and platform. In the past 20 years, PDF has evolved to become a standard for electronic document management. It now offers complete digital transformation solutions for your document needs, including:

INFORMATION SHARING

Share documents between departments, partners, and clients with the ability to view and print the document as intended on any device, even if you do not have the same software.

ACCESSIBILITY OF DOCUMENTS

Make documents accessible to those with visual impairments by appending 'smart' information with PDF/UA, informing readers what is contained in the document.

SEARCHABLE ARCHIVES

Making your documents searchable, by adding metadata, creating tags and structural content used by search engines and other software.

DIGITAL INVOICES

Streamline invoicing while adhering to standards such as the ZUGFeRD e-Invoicing standard that allows automated processing.

DIGITAL SIGNING

Offer a secure way to digitize the confirmation process and show if the document was altered in any way.

To achieve digital transformation with PDF, you need a smarter PDF creator

Powerful PDFs come from integrated solutions that can be easily embedded into applications, adhere to security standards, consistently track with latest developments and have support from a large community of users.

iText is the world's largest and most widely used PDF library, with over 15 years of dedicated development. iText has empowered millions of developers to solve their customer's document challenges and transform workflows.
