

pdfInvoice

an iText 7 add-on

Invoices Readable By Man And Machine

With **pdfInvoice** you can take advantage of the German ZUGFeRD standard for e-invoicing. This means your typical PDF invoices come packaged with an XML attachment that can be used for machine-automated processes and are structured along the ISO guidelines of PDF/A-3. This allows you to use one **pdfInvoice** document for all of your clients, large or small, without setting up costly software platforms and agreements. Having a single invoice with dual purpose cuts significant time when sending, filling in, and signing invoices.

Optimize Your Invoice Cycle

iText Software's programmable libraries are used all over the world by companies and organizations to generate and edit PDF documents, often at high volumes. With the most recent iteration of its platform, iText 7, you can take advantage of its add-on **pdfInvoice** to automate your invoicing process in a simple way that makes sense for small businesses.

Key Advantages

- Universal readability by man and machine
- Automate routine operational tasks
- Fully compliant with internationally recognized PDF standards
- Integrated into your own trusted work environment
- Low cost option for invoice automation
