Business case I Electronic founding of juridical forms

- Project E-griffie at Federal Public Service Justice (BE) at the commercial court (**)
 - Ph. A: creation of 'non profit associations' -- start: oct 2011
 - Ph. B: creation of other juridical forms (agriculture company, association partnership, ...) -- sept 2013
 - Ph. C: modifications of juridical forms (address, name, board of directors, ...) start: june 2014

(**) (sponsored by service for afdministrative simplification DAV)

- Potential:
 - +/- 10.000 creations on yearly basis
 - +/- 130.000 modifications on yearly basis
- Status in production
 - Growing nr of electronic deposits -- 170 'non profit associations' only per month
- Gains:
 - Facilitate citizens:
 - A citizen can start a new company online in +/- 3 minutes
 - No transport costs for the citizen
 - Workload reduction in the commercial court
 - Input data gets validated in an early stage limited rejections in the court
 - Administrative simplification
 - Reduced consumption of paper

- Web application <u>www.egreffie.be</u> / <u>www.egreffe.be</u> used by the citizen for founding organizations in Belgium within 3 minutes
 - Identification based on eid login
 - PDF document generation based on XFA
 - E-payment based on Fedict/Ogone
 - Digital signing (E-signature based on XADES standard)
- Status in production
 - 3.550 companies created full electronically

Federale Overheidsdienst **Justitie** Service public fédéral **Justice**

CSC

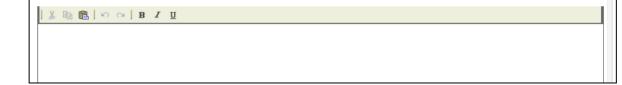

- Step I: collection of data
 - name, address, board of directors) gets collected in the web application (A)
 - the statutes, which are signed by the founders, are uploaded (B)
 - The data for publication in the Belgian Monitor is uploaded in a rich text editor (C)

CSC

- Step III: transfer data using the Belgian Federal Services (FSB) Bus
 - Data gets electronically signed (XADES standard) using eid card
 - Electronic payment using Fedict/ogone
 - Transfer data using Fedict/FSB webservices
 - Fedict distributes data to authentic source enterprises (KBO), authentic source acts (justice), Belgian Monitor
 - The full process takes +/- 3 minutes

Business case II Authentic source judgments

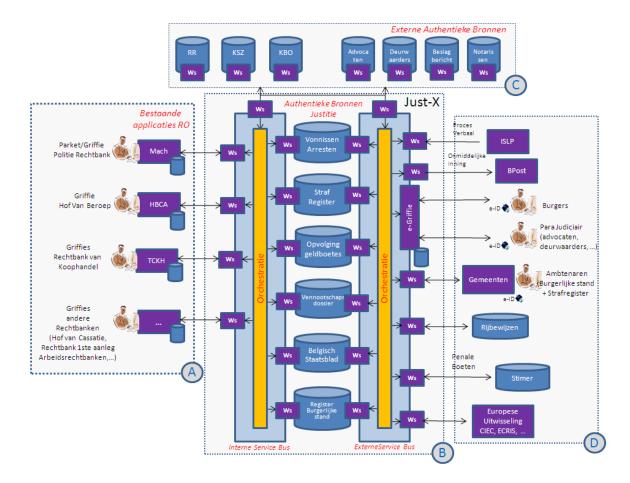

- Project JustX at Federal Public Service Justice (BE) court of appeals / police court
 - central judgement/condemnations database + delivery of extracts
 - · Metadata is stored in db
 - The judgement is stored in the CM system in 2 formats: PDF text + PDF scan
 - Future evolution to electronic signatures
 - Automatic feed of condemnations to criminal record / fines
- Potential:
 - +/- 700.000 judgements / year
 - +/- 200.000 condemnation transfers / year
- Status in production
 - 30.000 extracts have been delivered in a few months
 - 10.000 judgements stored
- Gains:
 - Reduce paper costs (archive / post)
 - Workload reduction in the Court of Appeals (administrative simplification)
 - Extracts can be taken full electronically (no need to go to the paper archive)
 - A new modern SOA oriented architecture as a base for future projects

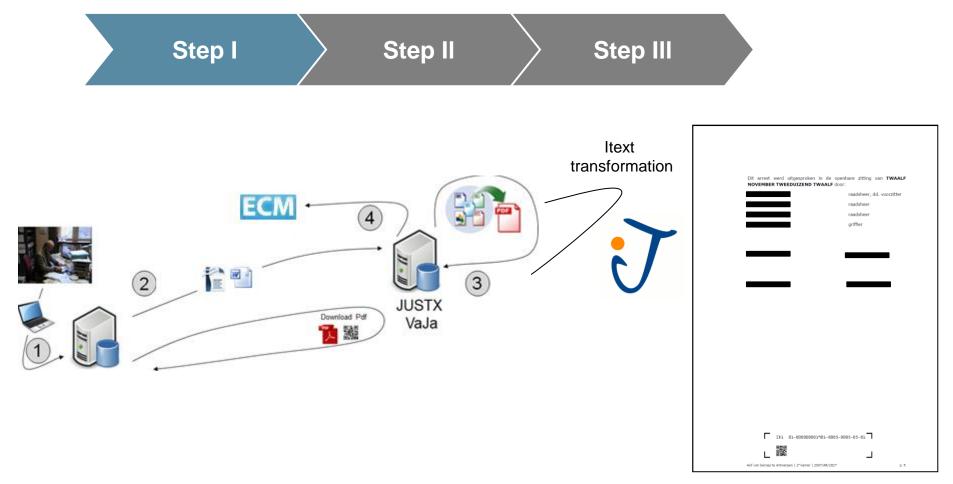

- All judgements are stored in the central judgements database
 - Step1 preparation of the judgement:
 - All judgements are uploaded in the central JustX system as native documents
 - The document gets renditioned from native document to PDF text
 - The system generates a pdf text with barcodes on every page of the judgement using itext
 - Step2 The document gets signed by the judge
 - The judge signs by hand
 - The judgement gets scanned,
 - The pdf scan image of the judgement gets automatically linked to the corresponding judgement
- Judgements extracts are delivered by clerks

J

Schema JustX architecture

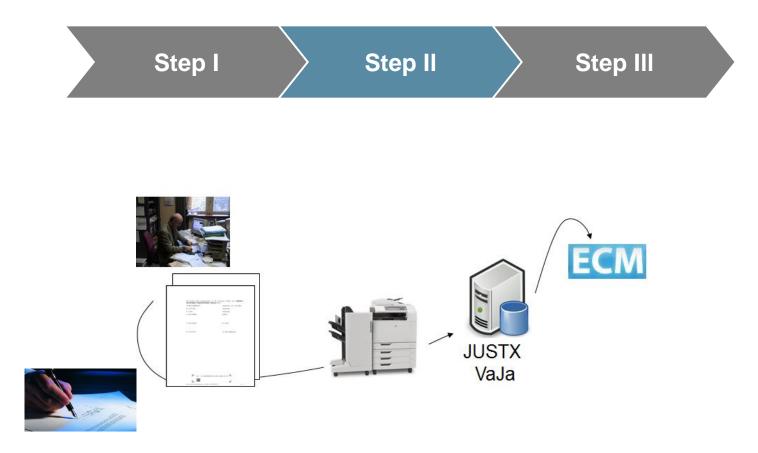

- Step1 All judgements are stored in the central judgements database
 - Document storage in db and CM system (in native format + barcoded pdf text format)
 - Transformation of the PDF is done with itext (adding a barcode per page + page numbering)

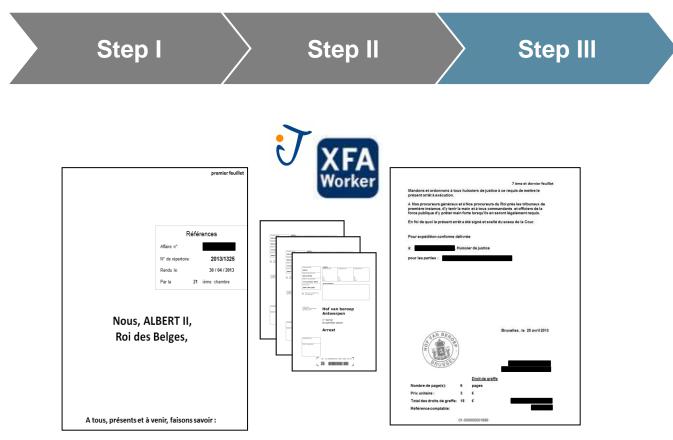

CSC

• Step2 – the judgement get scanned after verdict judge and signature

- Step 3: All judgement extracts delivered by the clerks are generated using itext/XFA
 - The scanned version of the judgement is in synch with the one in the paper archive. Re-scan is done when needed.
 - The extract itself (frontpage, endpage, ...) is generated using itext /XFA

Judgements -- condemnation extract

Condemnations are transferred from the judgements database to the criminal records

Itext/XFA

- When human interaction is needed, a condemnation report can be generated by the system on demand.
- The extract itself is generated using itext /XFA
 - XFA templates
 - XML data

Numéro de	Jugement du		Numéro de jugement
Casier Judiciaire	Coulé en force de chose jugée le Date d'établissement :	2	Numero de jugement
Numéro du Registre nat Nom Prénom(s) Lieu et date de naissand Sexe			

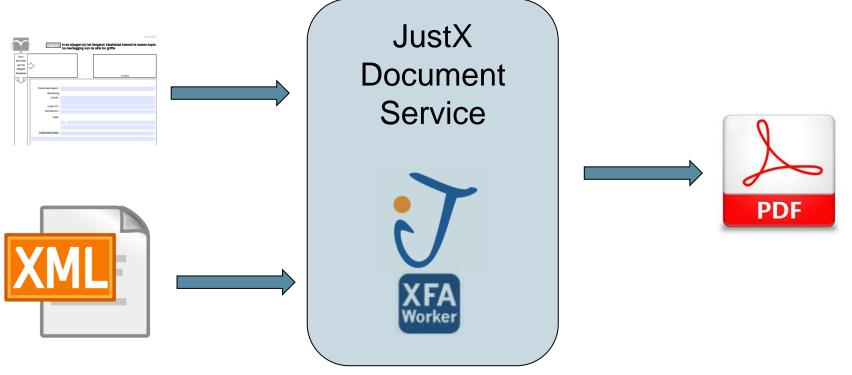

June 18. 201∉

Technical solution

- JustX Document Service
 - Web service
 - Input:
 - XFA templates (Adobe LiveCycle Designer)
 - XML data
 - Output:
 - Flattened PDF

Thank You
