

UNLOCK THE POWER OF PDF: Key features and benefits

PDF has matured considerably since it was released in 1993 as a “digital document.” Today it is a standard for document sharing, automation, and more that can streamline document processes for many types of organizations. At iText, we have been on the forefront of PDF evolution since 2000, focusing on usability, automation and standards. Our software has improved with each release and iText 7 is no exception. It can help you create PDF files that are more versatile than any off-the-shelf PDF creator and allow you to embed its functionalities within your own software, allowing for digital transformation.

iText 7 comprises iText 7 Core and a number of value add-ons for specific document tasks. New add-ons will be developed continuously to expand the scope and advantages of the iText platform.

The powerful PDF platform

iText 7 Core’s code libraries can be embedded in applications to create the type of PDF files you want. Whether you’re creating batches of files automatically to add to a digital archive or you want to set up a form campaign for your customers, iText 7 can help you get it right. In addition, iText 7 has a number of add-ons for specific use cases you may encounter.

Harness the power of PDF, with value add ons

pdf2Data

Extract information from invoices and templates

PDF documents - such as invoices for example – mostly contain a lot of important information that can be hard to access. pdf2Data allows you to quickly extract and process that vital data from thousands of PDF documents by creating a PDF template.

pdfHTML

Easily convert HTML to PDF

HTML and CSS content can easily be converted into PDF with our new iText 7 add-on, pdfHTML. This add-on is a premium upgrade from our XML Worker, providing you more functionality out of the box, and easier extensibility with dynamic forms. pdfHTML supports a wide array of HTML tags and CSS properties as well as processing of responsive HTML by configuring media queries.

pdfXFA

Flatten XFA forms for an optimal user experience

Dynamic PDF files are invaluable to automating document processes, allowing you to generate new fields based on user responses and automatically filling them, if you set the proper parameters. pdfXFA allows you to process and finalize dynamic forms and is the successor of XFA Worker, offering all of the same functionality but with a convenient API.

pdfDebug

Fast and thorough PDF structure inspection

With the pdfDebug add-on, you can get a crystal-clear insight in how your PDFs are built and make changes in their structure. You can see your different content streams and objects, correct file size errors and make sure your PDFs work the way you want them to.

pdfCalligraph

Advanced typography support

Off the-shelf PDF creators often have problems with character interactions or writing systems such as the Indic Devanagari family, and with compound characters that are difficult to separate in text, making text extraction difficult. pdfCalligraph solves this challenge by offering a neat conversion to PDF for these scripts and stylistic improvements, so that you can use the font features and writing systems of your choice in PDF.

pdfInvoice

Invoicing for both man and machine

Simplify invoicing by integrating XML into a PDF container. The most advanced standard for this is the German ZUGFeRD that allows you to send and receive invoices in PDF without specific software needs. pdfInvoice allows you to be fully compliant with it by producing PDFs that can be correctly interpreted by both devices (through the XML components) and human users (through the PDF visualization), ultimately saving you time, effort and money on countless paper processes.

pdfSweep

Keep your documents clean of sensitive data

Many people think PDFs are insecure, as it contains sensitive and private information that cannot be removed permanently. It is possible, but it isn't easy. With pdfSweep, you can clean-up PDFs in a user-friendly way. It allows you to remove sensitive data from a PDF file completely, keeping you compliant and your sensitive information safe from prying eyes. pdfSweep also complies with Europe's GDPR and the Freedom of Information Act (FIA).
